

PSYCHOLOGICAL FEATURES OF THE DEVELOPMENT OF SOCIALIZATION SKILLS OF YOUNG PEOPLE IN THE CONTEXT OF GLOBALIZATION

Baxtiyorova Umida Ulug'bek qizi
Bukhara State University researcher

Annotatsiya. maqola globollashuv jarayonida yoshlarning ijtimoiylashuv masalalari, ularda ushbu ko'nikmalarni rivojlantirishning ahamiyati va psixologik xususiyatlari, yoshlar ijtimoiy ko'nikmalarini shakllantirishda oliy ta'lim muassasalarida yaratilgan ijtimoiy va psixologik sharoitlarning o'rni va ahamiyati tahlil qilish, ijtimoiylashuv jarayonida pedagoglarning ta'sir kuchii, psixologik trening va amaliy mashg'ulotlar, motivatsiya, o'z-o'zini anglash kabi omillar orqali ijtimoiy ko'nikmalarni rivojlantirishning afzalliklari yoritilgan.

Kalit so'zlar: globollashuv, oliy ta'lim, yoshlar, ijtimoiylashuv, psixologik xususiyatlar, empatiya, o'z-o'zini anglash, motivatsiya, pedagogik model.

Аннотация. статья вопросы социализации молодежи в процессе глобализации, значение и психологические особенности развития у них этих навыков, роль и значение социально-психологических условий, созданных в высших учебных заведениях, в формировании социальных навыков молодежи анализ, влияние педагогов на процесс социализации, психологический тренинг и практическое обучение через такие факторы, как мотивация, самосознание преимущества освещены.

Ключевые слова: глобализация, высшее образование, молодежь, социализация, психологические особенности, эмпатия, самосознание, мотивация, педагогическая модель.

Annotation. the article covers the issues of socialization of young people in the process of globalization, the importance and psychological characteristics of the development of these skills in them, the role and significance of social and psychological conditions created in higher education institutions in the formation of youth social skills analysis, the benefits of the development of social skills through factors such as

Keywords: globalization, higher education, youth, socialization, psychological characteristics, empathy, self-awareness, motivation, pedagogical model.

The development of socialization skills of young people in the process of higher education is an important factor for their success in personal and professional life. Socialization skills include aspects such as the proper communication of young people in a collective environment, the management of social interaction, and the free expression of one's own opinion. In this process, higher education institutions play a large role in promoting the psychological development of young people and ensuring their integration into the social environment. The socialization of young people receiving education in higher education institutions forms their personal and professional image. Young people learn and assimilate various rules and norms of society during this period. This creates favorable conditions for the development of the social skills of young people.

Socialization skills are those that determine a person's ability to successfully communicate with other people, work in a team and behave in accordance with the social environment. Socialization skills include the following (see Table 1).

Table 1
Socialization components of skills

No	Socialization skills	Components	Function
1	Communication skills	Listening	Listen, understand and reflect respectfully on the opinions of others.
		Initiative	Actively participate in communication, start a word, ask questions.
		Speak	Express their thoughts in a correct and clear way, ask and answer questions.
		Delicacy	Control your own emotions during communication and not spoil the relationship
2	Ability to work in a team	Collaboration	To cooperate with others, to move towards one goal.
		Responsibility	Responsibility for the team, the performance of their duties.
		Compromise	To be able to compromise to complete the team program.
3.	Building and developing social relationships	Respect	Dealing with other people with respect.
		Tolerance	Being willing to accept different cultures and opinions.
		Tolerance	Forgiveness and acceptance of other people's defects
4	Flexibility	Trust	To believe other people, to listen to their thoughts
		Fit into a new environment	Adapt himself to new situations and quickly establish communication with new people
		Adaptation to change	Quickly adapt to changing conditions and act in accordance with new situations.

Theoretical analysis shows that socialization skills are important for a person to be successful in their social life. It helps a person to understand his thoughts, understand others, cooperate and solve various problems.

In particular, through workshops, group work and internship sessions organized in the educational process, young people master the processes of socialization. From a psychological point of view, the development of skills such as self-awareness, cooperation and communication in this process is of fundamental importance for socialization. The psychological aspects of developing themselves socially in the process of higher education for young people are a comprehensive concept. In the process of socialization, an individual's self-confidence, self-esteem in society and the ability to find a place in social interaction are strengthened. It is a unique process in which young people develop skills to form relationships, manage their own thoughts and feelings, and approach themselves critically. For example, young people have difficulty interacting in Group Training and in the process of gaining practical experience, and learn from them. This process serves to develop the abilities and capabilities of young people.

One of the most psychologically important factors in directing youth to socialization in higher education is the development of motivation and self-awareness. Young people with self-awareness learn the skills of determining their social status and showing behavior that matches that position. At the same time, through self-awareness, young people clearly define their goals and develop the social skills necessary to achieve them. Motivation, on the other hand, further speeds up their socialization process. For example, the desire to achieve social success helps young people to work on themselves, be active in communication and

easily adapt to the social environment. The role of higher education institutions in the development of socialization skills is great. They play an important role in the formation of psychological mechanisms that regulate and direct the processes of socialization. In the process of socialization of students, various activities organized by higher education institutions are important, including seminars, conferences and internship programs. Such activities help to develop communication skills among young people, strengthen self-expression and teamwork skills. In addition, in higher education institutions, young people establish friendly relations with each other and learn how to act in different social situations.

Increase social activism and develop communication skills: higher education institutions create an environment that increases youth's skills in exchange of ideas and working in collaboration, which contributes significantly to their socialization process.

Role of educators and mentors: educators provide social role models for young people and help them form responsible, respectful relationships. Their display of social responsibility is an example for young people.

Developing empathy and listening skills: the development of empathy is important for building constructive and sincere interactions among young people. This skill teaches them to understand the feelings of others in different situations and to be attentive in the relationship.

Psychological trainings and practical classes: training and practical classes organized in Higher Education activate the process of socialization of young people, teach them to work in a group, communicate and behave in different situations.

Development of motivation and self-awareness: young people learn to value themselves in society, gaining motivation to clearly define their goals, as well as work on themselves to achieve social success.

There are a wide range of interactions in the development of social skills for young people, which can be both self-directed and community-driven. In self-directed processes, young people learn from their personal experiences. For example, through independent research work in the process of higher education and participation in team projects, young people learn how to deal with themselves and their teammates. This serves to further develop their social skills. At the same time, the processes controlled by society, that is, guidance and guidance in higher education institutions, play a large role in the process of socialization of young people. In directing young people to socialization, higher education institutions are based on scientific research to successfully carry out their social and psychological tasks. They use methods of managing the process of socialization, taking into account the individual and social characteristics of young people. For example, psychological trainings, training programs, and various problem-solving techniques used in higher education can help young people maintain compatibility in social interaction. Psychological characteristics such as mutual respect, empathy and a sense of responsibility are also developed in the process of socialization of young people.

In conclusion, the development of socialization skills of young people in the process of higher education is considered necessary for their future personal and professional success. Higher education institutions need to carry out comprehensive measures in this process to promote the social development of young people, to ensure their formation as psychologically stable and responsible individuals. Through this, young people grow up to be individuals who are successfully integrated in society, self-respecting and able to deal with other people correctly.
