

## GENDER EQUALITY IN EDUCATION

*Abdujalolova Shakhzoda**Student of group Marketing**“Silk road” International University of Tourism and Cultural Heritage*

**Abstract:** The human race is born to seek news , whether it is a woman or a man , this process must always continue. But in some countries we see a lot of cases of gender segregation , and it does upset everyone . In some nations level of backwardness is very low compared to countries which have high gender equality , for example , Yaman , Afghanistan , Nigeria , etc . In learning , there should be not any allocation like woman or man , young or old , poor or rich though problems such as pressure from parents or husband , religious obstacle , bad financial condition can be obstacles in many cases , so when such negative influences are not eliminated , this is impossible . Equality in education is much more important than other positions also there are plenty of ways to do it . For instance starting separate schools for girls , which are for Islamic countries , or setting up universities for them and government can find new laws like delayting kontrakt . The education of women and girls is more important than that of boys , not only for themselves but also for the nation . A child brought up by a good and knowledgeable mother will never do anything bad , because there are no psychological disorder in them and for their own benefit , they will be able to support themselves even whithout a spouse . Considering the high number of divorces these days , this is very essential for them and prevents them from going down various destructive paths .

**Key words :** Education , Yaman , Afghanistan , Nigeria, Iraq , Suria , Central Asia , MHM , Kenya .

**Introduction :**

Studying is the most necessary item in the world for ladies . For many years they have not opportunities like boy` because of their ceremonial in many times , they have point that girls should not study or their husbands can take care them . Furthermore in some nations like Afghanistan , Suria and others even any schools for girls cannot be found therefor they are not educated anywhere . Statistics show that only one of 1760 women is accomplished and we have a confidence in that it is so awful . This issue causes plenty of another problems such as illiteracy , suburbia and poverty in view of the fact that kids take main knowledge from their mothers . This article will outline importance of studying ladies , benefits of this .

**Body 1:**

In Islandy and Norvegy democracy is high although girls who live in Suria and world wide find up a lot of abuse . In Suria , Afganistan , Yaman , Pakistan , Central African Republics , Iraq , Mali, Sudan , Nigeria this trand is very increased . (Wikipedia ) . In real life , we see obstacles against girls` education every hour of the day , many parents around us do not

understand how important it is for women to be educated , and of course this does not affect the society . Even when their daughter enters the university of her choice with her own strength and knowledge , parents strongly oppose her and marry her off . If we continue without going away from the topic , girls who have never left their homes are much more backward compared to educated girls , and at the same time they are young in term of consciousness . Therfore it is very difficult for them to become the bride of the bride feel that they should provide them with a large amount of sarpo , and this is the biggest drawback in our society . Another saddest situation is that women have to endure these pains because their parents do not accept their daughters in this situation . But eventually if the girl divorces due to of the fact that she cannot stand these difficulties , then she will face worse problems . If she has children , she will have trouble raising them because she is uneducated and therefore unable to work . If this girl had been educated , the situation would have been completely different , she would have been married to an educated family like herself , she would not have faced any difficulties and she would have been happy .

## Body 2:

But it is good that nowadays the attention to science in our society is slowly increasing , because our state is paying a lot of attention and funds to the education of women and girls . For instance , delaying the money from the company is in the form of a loan , and the most pleasant thing is that it is the loan for girls ladies without interest . Another convenience is that madams are not required to pay a contract for studying for a master's degree . Such laws cannot be enumerated , we have written only the most prominent ones . These laws show that our state asks us only to get knowledge , and it is our duty to so . These action are not showing their results , nowadays we meet women in almost all field , for example aviation , bar , medicine , interior and others , not only Central Asia other regions . Time and again , even education has been a challenge for Kenya women . This aspect has been and continues to be a barrier in achieving good MHM was their compound or even their sleepimg area instead of a bathroom and among the schools in rural areas , only a third claimed to have facilities where girls could cope with their menstruation . Another concern plaguing the Kenyan female population is the lack of eunuchs who reported enough materials necessary for the maintenance as in 2016 , less than half of women said they had enough feminine hygiene supplies . Furthermore , the statistics reviewed earlier point to the necessity of greater freedom of discussion around menstruation aspects . As for discussions at home , in 2014 only 50 percent of women and girls were whiling to talk about periods and bleeding , while only twelve percent of girls said it was appropriate for mothers to tell them about the menstrual cycle . There is also a gap in Kenyan girls' knowledge , as proper research shows, about each four girls in Kenya continue to associate the prospects of being pregnant with the act of menstruation . (Kesey Sampson ) . Also in India average female literacy rate worldwide hovers around 79,9% whereas men's rate stands at 89,2% . India trails behind with 62,3% for women and 80% for men . ( Jenna Cook ) Educating girls yields widespread benefits-improved health reduced population growth increased productivity economic growth . Over past decade awareness has proplelled girls' education to forefront of national policy international enrollment now witin reach many developing countries . However notwithstanding disparities educational opportunities boys girls persist . (A blind spot in girls' education ) October 11 marks International Day of Girl Child when educators worldwide reaffirm commitment adancing girls' rights via education . In this day Nadine A. Molloy who is

Principal of Ardenne High School in Jamaica , former President of the Jamaica Teachers` Association , and Education International Executive Board member says that „ As a graduate of an all-girls school providing an inclusive environment that values and listens to girls` voices comes naturally . It is crucial to encourage idea and ambition sharing while providing guidance to achieve alignment with life goals – this fosters growth . Conversations grounded in trailblazing women`s authentic experiences and a sence roles by first leading in their own lives – a key aspect of personal growth . Engagement and mentoring occur through involvement in student governance and co-curricular activities leadership roles- these provide a platform for agency . Girls are given the power to amplify perspectives collaboratively and respectfully inspiring the courage to chese wildly impossible dreams and make them a reality.

### Overview:

Thus , regardless of gender , people should always be thirsty to take knowledge , this is useful not only for themselves , but also for future generation , and that is why plenty of countries are trying to raise gender equality , absolutely this condition provides a great deal of consequences . Our only request is to give your daughters , sisters and women the opportunities to learn , in view of the fact that they are the ones who will educate and educate your children and grandchildren . Never forget about it .
