книга, ребёнок дошкольного возраста, обучение, условие, интерес, жизнь, создание, духовность, просвещение, наставник, значение.

Abstract

This article is about teaching preschool children to love books.

Key words

book, preschool child, learning, condition, interest, life, creation, spirituality, enlightenment, mentor, meaning.

If we look at the history of the development and progress of society and the nation, the place of educated, spiritual and enlightened youth in the development of society is incomparable. Alisher Navoi, the great thinker, said, "The book is a great teacher, the most important source of knowledge and spiritual growth," and Sahibqiran Amir Temur said, "The book is the source of all creativity, creativity, and intelligence. Knowledge is the basis of knowledge. "Life is a teacher," they said.

It has been known to all of us since ancient times that the book has an incomparable importance in the spiritual development of human society and human life.

"The dream of every heart is life, and a book is a life for the one who knows its value," said H.H. Niazziy. If we look at the history of the development and progress of society and the nation, the place of educated, spiritual and enlightened youth in the development of society is incomparable. The importance of the book in human life is incomparable, it is an inextinguishable light that illuminates the paths of human life, a source of happiness that gives meaning to human life, a loyal friend that accompanies in any situation.

Taking these aspects into account, today systematic work is being carried out to increase the interest in books and the level of reading among young people and the population, and to widely promote reading. Along with getting to know the world, it gives a sense of instilling love and enjoyment of beauty.

The book teaches students how to develop a positive character in changing their scientific and spiritual outlook, and how to solve life and life conflicts. The book will help you become a master of your profession in the future. Every student who acquires these qualities matures as a person with high traditional thinking.

After all, the book is a spiritual heritage that strengthens the chain of generations. The book affects the psyche of people, leads them to spiritual and moral perfection, affects their emotions and gives pleasure to the student along with learning. In order to increase the culture of reading among students, it is important to read more artistic and historical works, to instill a love for reading, and to increase the level of reading.

In this regard, the holding of the national scientific-practical conference on the theme "Book-happiness key" on December 15, 2023 by the students and professors of Angren University under the initiative of "One month - one book" became the basis for the formation of reading.

At the conference, the speeches of the heads of the state and non-state higher education institutions of

our republic, the Angren city administration, and the heads of the republic's spiritual-enlightenment department aroused the interest of students and professors.

The main goal of this is: in the process of wide introduction of reading in practice, first of all, we can reconstruct the existing libraries, update their material and technical base, provide them with the necessary scientific and literary literature, we can widely introduce modern innovative technologies in the activities of libraries and use them effectively.

Necessary measures for the implementation of these works have been determined and their implementation is regularly monitored. As a clear proof of this, the 5 important initiatives in the development of our country, "Raising the spirituality of young people, organizing systematic work on wide promotion of reading among them" is a clear example of our opinion. Our great-grandfathers also emphasized that the role of the book in the upbringing of a child is extremely important, that it is necessary to highly appreciate it as an inexhaustible wing of thinking that enriches the spiritual world of a person, as a highly creative and creative tool, and to use it effectively.

During this period, children are prepared to read books. First of all, they should learn the skills of speaking, listening and speaking. The process of forming children's interest in books will give a very positive result if we start with the family, and if we continue it in cooperation with the family in preschool educational organizations, the expected result can be more effective.

Just as all the criteria of upbringing are formed in the family, the culture of reading will have a good effect if it starts from the place of education. Because it is not for nothing that it is said, "A bird does what it sees in its nest." In the holy place, it is good for parents to be role models and to read books themselves in order to increase children's interest in books.

If the parents in the family love books, the child raised in such a family will also be familiar with books, such children will have a wide worldview, a wide range of thinking, polite, kind, try to do good to others as much as possible, every word they say zi grows up to be an intelligent child who thinks about what he is doing, in a word, tries to show the qualities of a perfect personality. The systematic conduct of reading in a family environment increases the effectiveness of the expected result.

The President of our Republic also emphasized that the role and importance of books in the education of the young generation is incomparable, "At the same time, while mastering the latest achievements in the field of information and communication, we must increase the interest of young people in reading books, it is necessary to pay special attention to making friends with books, to further increase the reading level of the population", his opinions are proof of our opinion [1, p. 27].

Based on the above, we can recommend the following to parents:

- be an example to make the child interested in books;
- read examples from the book you read or tell a story;
- choose age-appropriate thoughts for the child to speak;
- create a family library, create a separate section for the child;
- choose and buy books suitable for the age of the child;
- regularly read to your child a few poems, children's poems with repeated lines, picture books, various stories and fairy tales;
- occasionally take children to the library and bookstore;
- let the books you choose meet the pedagogical and psychological requirements.

In short, the basis of all good works and creative ideas is a book. It is also a book that shines the light of knowledge on us. That's why today, if we start the interest in books from the family and for this, we will create age-appropriate libraries for them.

On the basis of the formation of reading skills in children, it is necessary to develop oral speech and increase love for books. If we start from the family to rely on the book as a companion and adviser, a lifelong loyal friend of our young people who are capable of great things, then we would contribute to bringing up worthy creative young people for the future of our great country. A book has always been a book in its own name, and the biggest problem facing us is to love a book and to find a way of life through reading a book. This leads to self-education of reading culture.
